PROFESSIONAL SUMMARY

Results-driven Software Engineer with hands-on experience developing enterprise applications using Angular, Java, and Spring Boot. Currently working as an Associate Software Engineer Intern at Novo Soft Technologies, contributing to enterprise software projects including Novex AR Tech and backend solutions for business applications. Backed by a strong foundation in full-stack development, RESTful APIs, database systems, and software engineering, along with nine months of experience as a Software Engineering Demonstrator. Currently advancing my expertise in Artificial Intelligence and Machine Learning, with the goal of transitioning into a full-time Associate Software Engineer role and building scalable, intelligent software solutions.

EXPERIENCE

Trainee Software Engineer – Novo Soft Technologies Pvt Ltd | 2026 – Present

- Contributed to enterprise software development within an Agile team.
- Developed RESTful APIs and backend services using Java and Spring Boot.
- Developed frontend features using Angular and TypeScript.
- Worked with MySQL, PostgreSQL, JPA/Hibernate, DTOs, entity relationships, validation, authentication, and authorization.
- Collaborated with the development team to implement, test, debug, and maintain production-oriented software features.

Demonstrator – Institute of Software Engineering | Jul 2025 – Mar 2026

- Assisted lecturers in conducting programming lab sessions and tutorials for 50+ students, explaining technical concepts and guiding practical exercises.
- Supported students in debugging code and understanding programming logic, helping them apply theoretical concepts to real projects.
- Prepared instructional materials and assisted in maintaining lab software and development environments, ensuring smooth class operations.

TECHNICAL SKILLS

- DevOps & Tools:** Git, GitHub, Docker, CI/CD (GitHub Actions), Postman
- AI/ML Tools:** Pandas, NumPy, Matplotlib, scikit-learn
- Frontend Development:** JavaScript, TypeScript, React.js, Angular, HTML5, CSS3
- Backend Development:** Java, Spring Boot, Spring Security (JWT), Node.js, Express.js, Python, RESTful API Design
- Databases & Data Management:** MySQL, MongoDB, PostgreSQL
- Software Practices & Concepts:** Object-Oriented Programming (OOP), Clean Code & Design Principles, Agile / Startup Development, AI & Machine Learning (Foundational)

EDUCATION

Graduate Diploma in Software Engineering

IJSE – Institute of Software Engineering | Feb 2024 – Present

- Major: Software Development | Minor: Machine Learning

Certified AI & ML Engineer Program

IJSE – Institute of Software Engineering | Nov 2025 – Present

- Specialization: Artificial Intelligence & Machine Learning
-

CERTIFICATIONS

Python Programming

University of Moratuwa | Oct 2023

- Centre for Open & Distance Learning (CODL)
-

KEY PROJECTS

Novex AR Tech — Enterprise Business Management Platform | 20256

- **Contributed to the development and enhancement of a full-stack enterprise application** using Angular, TypeScript, Java, Spring Boot, JPA/Hibernate, PostgreSQL, and RESTful APIs.
- **Implemented and enhanced core business modules** including Customer Management, Employee Management, Quotations, Repair Orders, Expenses, and Reporting.
- **Developed RESTful backend services** following layered architecture principles, including Controller, Service, Repository, DTO, and Entity layers with validation and relational data management.
- **Delivered application features** including PDF report generation, dynamic filtering, pagination, modal-based workflows, and frontend-backend API integration.
- **Implemented and maintained authentication and authorization mechanisms** to support secure access to application resources.

Vitality Health Project – Diabetes Readmission Analysis | 2025

- Built a **data analytics pipeline** for diabetic patient records including data cleaning, preprocessing, and duplicate removal using **Python and Pandas**
- Enriched clinical data by **web scraping ICD-9 diagnosis descriptions** using BeautifulSoup and Requests
- Performed **exploratory data analysis (EDA)** with **Matplotlib and Seaborn** to identify patterns in demographics, medication impact, and readmission trends
- Designed the **Vitality Complexity Index (VCI)** algorithm to classify patients into **Low, Medium, and High** readmission risk groups
- **Tech Stack:** Python, Pandas, NumPy, Matplotlib, Seaborn, BeautifulSoup, Requests
- **GitHub:** github.com/shasidumalshan/Vitality_Health_Project

VLPS - Enterprise Traffic Violation & License Management Platform | 2025

- Engineered a **full-stack traffic violation management system** handling **500+ sample violation records** for license suspension and demerit point calculation
- Secured sensitive endpoints using **JWT-based authentication and role-based authorization**, improving system security and controlled access.
- Optimized **database queries**, improving response time by approximately **30% during testing**
- **Tech Stack:** Spring Boot, Spring Security (JWT), JPA (Hibernate), MySQL, REST APIs, Tailwind CSS, JavaScript
- **GitHub:** github.com/ShashinduMalshan/VehicleLicensePointSystemPro

PulseCare – All-in-One Personal Health Assistant | 2025

- Developed a **multi-module Flutter health application** with REST API integration and modular navigation.
- **Achievement: 3rd Place – Creative Software Solution Awards 2025 (Circle Edge).**
